Ejercicio 6

Ana Buendía Ruiz-Azuaga

March 13, 2022

1 Ejercicio 6

1.1 Apartado 1

Sea p el factor primo que tiene mayor periodo p=7789

Calcula los convergentes de \sqrt{p} .

Calculamos los convergentes para p:

```
A[0] = 88, B[0] = 1
A[1] = 265, B[1] = 3
A[2] = 353, B[2] = 4

```

1.2 Apartado 2

Calcula las soluciones de las ecuaciones de Pell, $x^2 - py^2 = 1$ Como el período de p es impar (111) tenemos que la menor solución de $x^2 - py^2 = -1$ es: a = 497586282289400856040823968725519168099846988012076378629818, b = 5638032137518668487771917797885014649796028953714788160325 donde a y b se han obtenido como los convergentes en el paso 110 (A[110] y B[110]).

1.3 Apartado 3

Calcula las unidades del anillo de enteros cuadráticos $\mathbb{Z}[\sqrt{p}]$.

1.4 Apartado 4

 \mathcal{Z} Es $\mathbb{Z}[\sqrt{p}]$ el anillo de enteros del cuerpo $\mathbb{Q}[\sqrt{p}]$?
